WORK EXPERIENCE

Infor, Hyderabad

Oct 2024 – Present

Associate Software Engineer

Infor develops industry-focused cloud solutions, and I contribute to enterprise payroll and HCM enhancements within an Agile SDLC-driven team.

- **Enterprise Application Development:** Delivered payroll and workflow enhancements in a **Java/JSP-based HCM platform**, enabling Canadian Federal and Provincial tax processing and improving transaction access for **1,000+ enterprise users**.
- **Security & Authorization:** Engineered secure conditional deep-linking with role-based authorization and transaction-state validation, eliminating unauthorized-access scenarios identified during UAT.
- **System Integration & Data Validation:** Integrated application logic with **IBM i-backed payroll systems** using SQL validations, supporting **10+ payroll fields** across Federal, Provincial, and Quebec tax rules with zero post-release data issues.
- **Secure SDLC & DevSecOps:** Resolved **50+ OWASP-aligned security findings** from **HCL AppScan Cloud** and contributed to CI/CD pipelines through SBOM generation and API-based validation reporting.
- **Quality Engineering & Testing:** Supported enterprise QA cycles through defect triage, regression testing, root-cause analysis, and Python-based validation scripts.

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL

Frameworks/Tools: FastAPI, PostgreSQL, SQLite, Docker, CI/CD, GCP, Git, Linux, REST APIs, WebSocket

ML: XGBoost, Scikit-learn, Pandas, NumPy

PROJECTS

AI Trader - Real Time Algo Trading System

June 2026

Python, FastAPI, XGBoost, DhanHQ API, WebSocket, SQLite, Pandas, NumPy, APScheduler, GCP

- Architected an event-driven machine learning platform using **Python, FastAPI, DhanHQ APIs**, and WebSockets to process live market data, automate execution, and manage configurable risk across **250+ NSE stocks**.
- Engineered an end-to-end ML pipeline with **56 engineered features**, XGBoost, probability calibration, and walk-forward validation on **266K+ OHLCV samples**, enabling real-time inference through a shared live/backtest engine.
- Optimized the execution pipeline for deployment on a **GCP e2-medium** instance using incremental feature computation, shared market data feeds, scheduled task orchestration, persistent state management, and lightweight SQLite storage to minimize CPU and memory usage.
- Developed a modular backend with asynchronous scheduling, broker REST/WebSocket integrations, automated model retraining, Telegram operations, deterministic backtesting, and production monitoring through heartbeat-based recovery.

SystemLens – Infrastructure Monitoring Platform

May 2026

Python, FastAPI, PostgreSQL, Docker, WebSocket, Grafana, psutil

- Architected a distributed infrastructure monitoring platform using **Python, FastAPI, PostgreSQL**, and Docker to collect **10+ system metrics** from multiple hosts for centralized observability and historical analysis.
- Built a scalable telemetry pipeline with configurable metric ingestion, batch processing, retry mechanisms, and real-time **WebSocket** streaming, ensuring reliable and low-latency data collection.
- Developed Grafana-powered dashboards and an intelligent alerting engine with configurable thresholds, anomaly detection, and historical trend analysis for proactive infrastructure monitoring.

EDUCATION

Chandigarh University

Aug 2020 – May 2024

B.E. Computer Science and Engineering — CGPA: 8.18

Mohali, Punjab

CERTIFICATIONS

- **Prompt Engineering for Everyone**

IBM Skills Network

ACHIEVEMENTS

- **Spot Award Q4 2025** – Infor, Hyderabad
- **3rd Prize Winner** – SPECATHON National Hackathon

Dec 2025

Sep 2023
